

Speed trap alerts on a motorcycle have always been difficult ...until now.

Cheetah's brand new Vizalert helmet display is the only motorcycle helmet display system in the world that works with leading radar detectors and laser defense systems to give you visual alerts for all radar and laser speed traps, discreetly in your helmet.

If you have a high-end radar detector, don't let it just sit there in your car, now you can use it on your bike too.

**Stop missing alerts . . .
. . . start missing tickets!**

Vizalert is the only visor alert system which identifies both the radar band and signal strength to help you correctly interpret and use the information.

- Green** = KA band radar
- White** = K Band radar
- Orange** = KU Band radar
- Yellow** = X Band radar
- Red** (medium pace) = Laser detector
- Red** (rapid flashing) = Laser jammer
- Blue** is reserved for future GPS use

The flash rate increases the closer you are to the signal source.

COMPATIBLE RADAR DETECTORS

Valentine 1

Bel STi Driver

Escort 8500 X50

The Vizalert display system is also compatible with Blinder laser jammers requires our Laser Jammer Interface

Radar detectors are useless on a motorcycle...

...UNLESS you know when they alert!

vizalert

Alerts you just can't miss!
